michaela.stoerkmann@armacell.com**Product declaration – AF/Armaflex**

In the production of Armaflex products, no silicone oils are used and Armaflex products are free from silicone oils (detection by IR spectroscopy, content of silicone oils <0,001%) taking into account the analytical detection limits.

During production of self-seal products, traces of silicone can be found on the interlayer between adhesive and masking paper respectively backing film. Thereby it's not completely excluded, that an amount of silicone could diffuse into the material, so that these materials cannot be named as silicone free completely.

Particularly in the automotive industry, where complete silicone free material is required, we advise not to install self-adhesive products. It has to be pointed out that, the amount of work increases by brushing the insulation material with adhesive.
