THE RIGHT TOOLS TO DO THE RIGHT JOB

**ARMAFLEX® ACCESSORIES** – the versatile and complete set of tools and accessories to enhance professional and secure Armaflex installations

## Armaflex accessories: versatile, professional and always just right

**1. Cleaning:** ▶ **Armaflex Cleaner** to clean soiled surfaces and Armaflex elastomerics prior to the application of adhesive or paint. Also to clean and remove adhesive from brushes and tools.

**2. Cutting:** ▶ **Knife set:** knives in different sizes for cuttings needed in Armaflex and Tubolit installations. Delivered in a practical plastic storage tube which includes a sharpening stone.  
▶ **Slitting knife:** a specially designed knife to slit flexible elastomer insulation tubes without cutting the inner surface unintentionally. Spare blades available.

**3. Gluing:** ▶ **Armaflex 520 Adhesive:** specially formulated adhesive for uniform and safe seam bonding of flexible Armaflex insulation materials and gluing of the insulation or its butt joints with a clean object. Low viscosity, easy to apply, quick drying.  
▶ **Armaflex HT625 Adhesive:** a one-component adhesive for homogeneous and safe bonding at joints and seams of Armaflex insulation applied on high temperature lines. It especially matches HT/Armaflex and can withstand temperatures of up to 175° C.  
▶ **Gluemaster:** metal can and brush in one with a dose pump to use with Armaflex adhesives. Fast and efficient gluing with an adequate glue spread on the surface.  
▶ **Gluecontainer:** reduces exhalation to the minimum. Glue and brush savings thanks to its automatic dosage apparatus and hermetic sealing. Ideal for on-site jobs where adhesive has to be assigned often from large glue cans.

**4. Finishing & protection:** ▶ **Armaflex tapes:** self-adhesive, rolled Armaflex tapes to repair damaged insulation, to wrap around pipes, valves and other objects which are difficult to access, to cover and secure joints and butt-ends, etc.  
▶ **Armafinish-99:** a non dripping, elastic water-based coating paint for Armaflex in grey and white colours. For protective or aesthetic purposes. The coating remains flexible and protects the insulation against UV, weathering conditions and ageing. Armaflex materials installed outside should be protected within 3 days.  
▶ **Tubolit clips, PVC tapes and others available** for the Tubolit product range
